Washtenaw/Livingston MCA, HEMS MCA System Protocols – Hazardous Materials Medical Response Team HAZMAT EYE IRRIGATION

Date: April 24, 2019 Section 11-7

HAZMAT Eye Irrigation

Eye irrigation should be performed on all patients with a significant exposure to a gas or when the eye is contaminated by a substance.

Pre-Medical Control

PARAMEDIC

- 1. Remove contact lenses.
- 2. Eyes should be flushed with 1000cc of Normal Saline minimum for each eye.
- 3. Use Tetracaine hydrochloride 0.5% 1 2 drops in each eye.
- 4. Insert an irrigation lens into each eye.
- 5. Hook lenses up to Normal Saline and irrigate with minimum of 1000 cc for each eye.
- 6. If the chemical the patient was exposed to creates a potential for secondary exposure, care should be taken to contain the run-off.
- 7. For corrosive agents, continue eye irrigation until arrival at hospital.
- 8. For Hydrogen Fluoride irrigate with a 1% aqueous solution of Calcium Gluconate (50ml of 10% Calcium Gluconate in 450 ml of NS).

SPECIAL CONSIDERATIONS:

Care should be taken that the patient does not rub eyes after administration of Tetracaine as damage can occur.

If available, perform a pre-treatment pH test.
