## HEMS MEDICATION SECTION (INTERFACILITY TRANSFER)

GLYCOPROTEIN IIb/IIIa RECEPTOR ANTAGONIST FOR ACUTE CORONARY

SYNDROMES

Section 9.54

### Glycoprotein IIb/IIIa Receptor Antagonist for Acute Coronary Syndromes

#### **Indications**:

In combination with Heparin for the treatment of acute coronary syndromes, including unstable angina and non Q-wave AMI and for those patients who are to be managed medically and those undergoing PTCA or artherectomy.

#### **Contraindications:**

Date: March 29, 2019

- 1. Known hypersensitivity.
- 2. Active internal bleeding or a history of significant bleeding within the previous 30 days.
- 3. History of intracranial hemorrhage, intracranial neoplasm, arteriovenous malformation or aneurysm.
- 4. History of thrombocytopenia following prior exposure to Aggrastat, Integrelin or ReoPro.
- 5. History of CVA within 30 days or any history of hemorrhagic stroke.
- 6. Major surgical procedure or severe physical trauma within previous month.
- 7. History, symptoms or findings suggestive of aortic dissection.
- 8. Severe HTN (systolic BP > 180 mmHg and/or diastolic BP > 110 mmHg).
- 9. Concomitant use of another parenteral IIb/IIIa inhibitor.

#### Procedure:

- 1. Maintain appropriate delivery rate by IV infusion pump,
- 2. Monitor V/S every 5-10 min.

#### Adverse Effects:

Bleeding, edema/swelling, hypotension, bradycardia, pain, dizziness, sweating, nausea.

If patient develops severe hypotension, active bleeding or hypersensitivity discontinue and notifying sending facility. If sending facility is not available contact medical control.
